CentOS end of life

Red Hat Enterprise Linux (RHEL) recently announced significant changes to the CentOS development roadmap, including the accelerated end-of-life for CentOS 8. These changes affect Schneider Electric's Data Center Expert, Data Center Operation, and EcoStruxure IT Advisor. No further operating system updates will be available for CentOS 8 after December 31, 2021.

We are listening closely to the CentOS community and collaborating with customers to determine the best options for migrating to a next-generation operating system for Data Center Expert, Data Center Operation, and EcoStruxure IT Advisor.

We remain committed to supporting customers on these software products. Once we determine the next generation operating system for Data Center Expert, Data Center Operation and EcoStruxure IT Advisor, we will provide updates in the EcoStruxure IT Help Center and in the EcoStruxure IT forum.

If you have any questions, please submit a ticket or reach out to your Schneider Electric sales representative or account manager.

Kind regards,

Authorized Signature and Date
